

Default name servers

Custom name servers (Active)

These DNS settings are active. Changes are published immediately, but may take time to propagate

Name servers Manage name servers

Name servers identify your domain's location on the internet. You can use Google Domains name servers and let Google manage them for you, or use custom name servers and manage them yourself. <u>Learn more about managing name servers</u>

Your domain is using custom name servers

v

DNSSEC Manage records

Domain Name System Security Extensions (DNSSEC) protect your domain from threats like DNS cache poisoning attacks and DNS spoofing. <u>Learn more about using DNSSEC</u>

No DNSSEC records have been set up

Slue records

Manage glue records

lue records (or registered hosts) are used to associate a name server with an IP address. You need one if your omain's name server is on a subdomain. <u>Learn more about using glue records</u>

Host name ②	IPv4 address ② IPv6 address ②
ns1.utahtech.rocks	144.38.199.50
ns2.utahtech.rocks	144.38.199.51
